

HIAB™ Small Business

HIAB™ Small Business

HIAB™ Small Business is the most cost efficient solution available for small businesses to implement vulnerability management. It provides accurate vulnerability detections and efficient data analysis to pinpoint the most critical tasks to increase security.

The solution is deployed as a virtual appliance running from the server network or directly performing the analysis from the employee's laptop.

To ensure a low cost of ownership, the appliance is self-contained, including its database, and updates of the appliance are combined with signature updates, meaning, the device is constantly maintained and secure.

Our solution

HIAB™ Small Business is an on-demand security scanning tool for small and medium enterprises to diagnose internal network vulnerabilities and to protect sensitive data. HIAB™ Small Business offers efficient vulnerability management in order to identify network exposures, detect vulnerabilities accurately and to create automated reports - enabling easy problem solving of internal networks.

Benefits of HIAB™ Small Business

- **Easy to get started, easy to use**

The solution is controlled via the browser using an easy to understand graphical user interface. All tasks are built around workflows and are designed for minimized effort to achieve results, yet with the flexibility to adapt to each organization's unique needs.

- **Quickly generate to-do lists to solve problems**

With a single click, reports can be generated that constitute a to-do list for system administrators without the need to understand the security related vulnerability information. You do not require to know the specifics of what is broken to fix the problem.

- **No platform maintenance**

Instead of supporting and patching a host operating system to keep security tools and their results safe, the HIAB™ Small Business is delivered as a stand-alone virtual machine, and all maintenance is done via updates to the scanner, which occur parallel to updating vulnerability definitions.

- **Unlimited scanning**

Just because you are a small company, you are not limited to infrequent scanning. Security is a process and the small business solution is not limited to a certain amount of scans or units to audit.

- **Basic web application security testing**

Audit web applications for basic issues, such as cross site scripting and SQL injection, solve the critical issues and catch the low hanging fruit in web application security directly with your network scanning.

Get Started

To start using HIAB™ Small Business, contact your local sales representative to sign up for an account. As soon as the order is accepted, you will be able to log in to the online portal and download your new virtual appliance.

In the online platform you will also find documentation detailing the use of both the HIAB™ Small Business as well as all other Outpost24 solutions in the support and knowledge sections.

Implementation & Managed Services

Only the Outpost24 enterprise solutions are provided with Managed- and Implementation services.

Upgrading

If you started using the HIAB™ Small Business but experience an increased need for additional functionality, support or services, do not hesitate to contact your sales representative for a trade up. Within the first six months, the full cost of the HIAB™ Small Business will be deducted from the price of the upgraded solution. During the following six months, half of the costs for the HIAB™ Small Business are deducted.

Support and SLA

The HIAB™ Small Business is intended to create a high value low cost solution for small businesses to gain increased security. To ensure the lowest costs, HIAB™ Small Business license holders are only eligible for email support, during office hours. You can find more information in the SLA section of the website or the product information for HIAB™ Small Business.
